

WE COMPLETE THE CYCLE

# *"Red Head"* DW-100 DRUM WASHER

# *"Red Head"* DW-100 SERIES DRUM WASHER

*Drum Cleaning Efficiently*

The *"Red Head"* DW-100 Drum Washer solves the problem of cleaning 30 to 55-gallon drums. It eliminates the operator's exposure to cleaning solutions and vapors. All the cycles are fully automated with the use of our PLC Systems. The operator places the drum in position and pushes the "start" button. The drum is washed in an inverted position; therefore, bottom drains on the drum are not required. Once the drums are clean, they are ready to reuse or recycle. The DW-100 high-pressure wash nozzle cleans with water or solvent, eliminating all foreign materials from interior surfaces. The wash solution can be recycled and reused during the wash cycle or the wash solution can be used once. A rinse cycle using clean, unused wash solution can be incorporated into the wash/rinse cycle.

The DW-100 is the solution to your drum cleaning needs. Capable of cleaning open-top 30 to 55-gallon drums or closed-top drums with a minimum of a 2" diameter bung hole.

The DW-100 is a workhorse. It is cost-effective. Once the drum is loaded and the washer is set, it can be left alone to do its work; saving labor costs. Customize your DW-100 - selecting from a range of pump motors and nozzles to better fit your desired washing needs. The control panel is user-friendly; completely controls the wash settings. It has a small footprint: 44" W x 60" D x 84" H. The wash nozzle, inverted drain, and wash pump are stainless steel. The DW-100 is available with explosion-proof electrical components and enclosures.

### **FEATURES:**

- PLC controls pre-programmed for wash and rinse cycles
- Explosion-proof Model available
- Various pumps available
- Cleans with rotating high-pressure spray nozzle (no brushes to wear out)
- Spray pressure up to 140+ PSI and 20 GPM volumes
- Small footprint
- Water / Solvent Models
- Cleaning time is typically 2 minutes or less.
- No exposure to volatiles or vapors
